HP0-755

1. In an MC/Service Guard installation, which directories are located on the share drive?

- A. /opt/OV/bin
- B. /opt/Oracle
- C. /var/opt/OV/share and /etc/opt/OV/share
- D. /etc/opt/OV

Answer: C

2. You have distributed a followthesun template to twenty managed nodes, and now decide that two of these nodes need unique templates. What should you do?

- A. Create node specific templates for those two nodes and distribute templates to the two managed nodes.
- B. Remove all templates from the respmgrs directory and distribute templates with the Force option checked to the two managed nodes.
- C. Log onto the two managed nodes and update the template from their distribution trees.
- D. Perform a template distribution to the two managed nodes with the templates option unchecked

Answer: A

3. Assume that the manager-to-manager configuration has been completed. Choose the three statements that are TRUE regarding Message Forwarding.

- A. Message Forwarding is done automatically by the initiating management server.
- B. The message can be forwarded to multiple managers.
- C. The message status updates are propagated to the management servers which hold a copy of the message.
- D. Messages can be forwarded to managed nodes.

Answer: ABC

4. The embedded performance component collects several metrics on the managed node and stores the data on the managed node. After _____ weeks the first week of data is overwritten.

- A. 2
- B. 3
- C. 5

Answer: C

5. To determine a managed node's primary manager in a backup server flexible management environment:

- A. the management server is added to the snmp destination list on the managed node.
- B. the IP address of the management server is held in the file /var/opt/OV/share/conf/mgrconf.
- C. the hostname of the management server is held in the file /var/opt/OV/conf/OpC/primmgr.
- D. the managed node responds to any OVO management server which establishes heartbeat polling.

Answer: C

6. Escalation of messages:

- A. occurs at management server level; the managed nodes continue to send messages to their primary managers.
- B. causes the original message to be acknowledged in the active browser of the operator who escalated it, so that it is only displayed on the escalated station.
- C. permits the operator to select an alternative management server to display the escalated message.
- D. allows messages from managed nodes to be sent by the managed node to a specified secondary manager.

Answer: A

7. Which one of the following statements about individual messages is true?

- A. When message forwarding is enabled, the managed node will send multiple copies of configured messages to each responsible manager.
- B. Managed nodes can send the same message with the same GUID to each responsible manager listed in its' flexible management template.
- C. A message sent from a managed node has a unique ID number (GUID), and only a single instance of this message will be sent out from the agent.
- D. When a message is escalated to another management server, a second message with a new GUID is sent from the managed node to the escalation manager/

Answer: C

8. A template is needed for the configuration of the service hours/scheduled outages. This template is _____.

- A. an XML file on the agent describing which action must be taken at the current time

HP0-755

- B. located in /etc/opt/OV/share/conf/OpC/mgmt_sv/respmgrs/outage on the management server
- C. an OVO template type, that will be distributed to the agents
- D. a binary file on the management server located in /etc/opt/OV/share

Answer: B

9. The message manager must reread the configuration template for the outages if the system administrator or an external application has changed that file.

A command line tool, _____, is available to start the (re-)configure request.

- A. opccfgout -update
- B. opccfgout - refresh
- C. opcconfig -update
- D. opcforwm -refresh

Answer: A

10. You have a backup OpenView Operations management server and you wish to replicate the OVO database configuration from your production system. The commands you will execute are _____.

- A. opccfgdwn, opcmgrdist, opccfgupld
- B. opccfgdwn, opccfgupld
- C. opctmlexport opctmplimport
- D. export data from oracle database into a file and reload it

Answer: A

11. Many Openview products have specific OpenView Operations templates and applications available for integration so that OVO can manage these applications. How is this done?

- A. Moving files in correct place and restarting the OVO Management server
- B. Proprietary APIs available only for Openview Applications that cannot be used by non-HP applications
- C. opccfgupld into the database
- D. opctmplimport

Answer: C

12. When using the Open Instruction interface you can _____.

- A. run the instruction text interface command by selecting the "Perform Action" button in the message browser
- B. add command line parameters to the command that gets executed on a per- condition basis
- C. use an instruction interface only in a single condition in a template
- D. use an instruction interface only in a specific template

Answer: B

13. Messages sent through the Message Stream Interface (MSI) _____.

- A. can be configured to be serialized in an assigned sequence for use by external applications
- B. can only be used with Event Correlation Services
- C. are generated in parallel to all external applications with no sequencing
- D. are made available to a single external application

Answer: A

14. What is the function of the ovtrap2opc command?

- A. To convert an OVO trap template file into a Network Node Manager trapd.conf file
- B. To convert traps held in the Network Node Manager binary event store to OVO format
- C. To convert a trapd.conf file created in Network Node Manager to an OVO trap template file
- D. To load MIB information provided by third parties into the trapd.conf file

Answer: C

15. The Open Instruction Text interface exists to enable you to:

- A. provide instructions for selected messages in one or more alternative formats, such as via web pages.
- B. send instructions configured in a message template to a Notification Service.
- C. send instructions configured in a message template to a Trouble Ticket interface.
- D. allow operators to access OVO manuals via the Dynatext provision of online manuals.

Answer: A

HP0-755

16. If you have made a change you wish to copy to an OVO backup server, which of the following is the best set of commands to upload the change?

- A. su - oracle; /bin/dbshut; exit; opcagt -stop; opccfgupld -replace <upload directory>
- B. su - oracle; /bin/dbshut; exit; opccfgupld -replace <upload directory>
- C. ovstop; opcagt -kill; opccfgupld -replace <upload directory>
- D. opcsv -stop; opccfgupld -replace <upload directory>

Answer: D

17. Which additional background process(es) will run if an Event Correlation Services template is distributed to a managed node?

- A. opcecs
- B. opcecsa and opcecs
- C. opceca and opcecaas
- D. opcecm

Answer: C

18. A customer plans to install OVO for Unix in a MC/Service Guard High Availability Environment. The cluster contains 3 physical nodes. How many license(s) must be purchased?

- A. 3 licenses for OVO management server and 3 licenses for the agents
- B. 2 licenses for OVO management server and 3 licenses for the agents
- C. 1 license for OVO management server and 3 licenses for the agents
- D. 3 licenses for OVO management server and 1 license for the agents

Answer: C

19. Threshold monitoring of values accessible from NT Performance Monitor:

- A. Must be done programmatically via an API.
- B. Requires the MeasureWare agent to be installed.
- C. Is configured with "NTPerfMon" at the beginning of the monitor program in the message condition.
- D. Is included in the default template with the OVO NT agent for all possible variables

Answer: C

20. A message may get a service name assigned to it from:

- A. The condition in a template that generated the message. This is the only method of generating messages with services.
- B. The Regroup Condition on the management server and the template condition that generated the message.
- C. The Service Navigator template assigned to the management server.
- D. None of these choices.

Answer: B
