Exam   :   **HP0-J27**

Title   :   Advanced SAN Architecture

Version   :   Demo

1.Which FCIP device supports HP B-series, but not C-series Fibre Channel switches for SAN extension?

A.SAN Valley SL1000 IP-SAN Gateway

B.HP StorageWorks MPX100

C.HP StorageWorks SR2122-2 IP Storage Router

D.HP StorageWorks Multiprotocol Router

Answer:D

2.Which critical areas must the SAN architect be able to discuss during SAN design? (Select three.)

A.data protection

B.data availability

C.data replication

D.SAN   scalability

E.high availability

F.SAN availability

Answer:A B D

3.During an infrastructure assessment, which SAN management category ensures that data is available and accessible?

A.SAN fabric management

B.SAN usage and monitoring

C.SAN storage management

D.SAN data management

Answer:D

4.Your customer wants to migrate from a monolithic to a modular SAN design. Which benefits does the new design provide the customer? (Select two.)

A.minimum complexity

B.lowest number of SAN switch ports

C.mainframe connectivity

D.consistent throughput and performance

E.very high scalability

Answer:D E

5.Which naming schemes are used by iSCSI nodes? (Select two.)

A.iSCSI qualified name

B.enterprise unique identifier

C.SLP service number

D.fully qualified domain name

E.world wide network identifier

Answer:A B
